AL Submission

AL Submitted (29-MG-2001) Sanger Centre, Hinxton, Cambridgeshire, Direct Submission

AL Submitted (29-MG-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, WK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequests@sanger.ac.uk

On Aug 31, 2001 this sequence version replaced gi:14596344.

On Aug 31, 2001 this sequence version replaced gi:14596344.

On Aug 31, 2001 this sequence version replaced gi:14596344.

On Ly a sequence assembly data is compared from overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequence with a core of the overlapping clone, as we submit sequence was finished as follows unless otherwise noted all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequenced with an alternate one plasmid subclone or more than one Mi3 subclone; and the associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw: SMRSPROT; T:, TREMBL; Wp:, WoRNDEP; Information on the WoRNDEP database can be found at http://www.sanger.ac.uk/Projects/Celapans/wormpep This sequence was generated from part of bacterial clone contrigs of human chromosome 10, constructed by the Sanger centre Chromosome 10 http://www.sanger.ac.uk/Projects/Celapans/wormpep This sequence of Phere and Dong. For futther information can be found at http://www.sanger.ac.uk/Projects/Celapans/wormpep This sequence of perer de Jong. For futther details see http://www.chori.org/bacpac/home.htm

VECTOR: PBACe3:6

Location/Qualifiers

Substance of clone RPI1-48HH12 is at 111825 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AL390197 188349 bp DNA linear PRI 29-AUG-2001
Human DNA sequence from clone RP11-190F19 on chromosome 10,

Note: Clone was sequenced in 1996 using Multiplex DNA Sequencing
Technology. Data may contain low quality seq uence and BAC/Cosmid
vector sequences. working draft, sequence. It currently
tonors: This is a working draft, sequence. It currently
tonors: This is a working draft, sequence. It currently
tonors: This is a working draft, sequence. It currently
tonors the submitted as given, however the sizes
tis believed to be correct as given, however the sizes
to the gaps between them are based on estimates that have
trois believed to be correct as given, however the sizes
this sequence will be replaced
thy the finished sequence as soon as it is available and
the accession number will be preserved.

**NOTE: This is a 'working draft' sequence. It current consists of II contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* This sequence will be replaced to 10062 by in length 100763 70763 70762 contig of 671 by in length 11533; gap of 100 by 11534 72371; contig of 671 by in length 11534 72371; contig of 1449 by in length 11534 72471; gap of 100 by 11534 72471; gap of 100 by 11534 72471; gap of 100 by 11534 72471; gap of 100 by 11534 72471; gap of 100 by 11534 72471; gap of 100 by 11534 72471; gap of 100 by 11534 72472 73920; contig of 1038 by in length 115466 86603; contig of 1038 by in length 11555 gap of 100 by 11553 by in length 11553 gap of 100 by 11553 by in length 11553 by in length 11553 by 11553 by 115555 contig of 15553 by in length 115555 contig of 15553 by in length 115555

Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Modecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA on May 13, 2003 this sequence version replaced gi:24942489.

The sequence in this assembly is a combination of BAC based reads and whole genome shorgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rarl/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table. manujum, D., matchin, A., matchin, A., matchine, B., Mandray, S., McLeod, M.P., Mill, T.Z., Menen, E., Milosavljevic, A., Miner, G., Minja, E., Montemayor, J., Moore, S., Milosavljevic, A., Morris, C., Mall, D., Navton, N., Murphy, M., Nair, L., Nankervis, C., Nail, D., Newton, N., Nguyen, M., Norris, S., Nwaokelemeh, O., Okwuonu, G., Olarnpunsagoon, A., Pal, S., Parks, K., Panerarak, S., Paul, H., Perez, A., Perez, L., Pfannkon, C., Plopper, F., Poindexter, A., Perez, A., Perez, E., Pu, L.-L., Puazo, M., Reily, M., Ren, Y., Regier, M.A., Reigh, R., Reilly, M., Ren, Y., Redter, M., Richards, S., Riggs, F., Rives, C., Rodkey, T., Rojas, A., Rose, M., Rose, R., Rais, S., Shen, H., Shetty, J., Shavatsbeyn, A., Stock, G., Shatsman, S., Shen, H., Shetty, J., Shavatsbeyn, A., Sisson, I., Sitter, C.D., Smajs, D., Sheed, A., Sodergren, E., Song, X.-Z., Sorelle, R., Sosa, J., Sheed, A., Sosa, J., Sheed, A., Sodergren, E., Sutton, A., Svatek, A., Tabor, P., Taylor, C., Stang, J., Waldran, D., Waldron, L., Walker, B., Wang, J., Walght, D., Waldren, R., Walder, S., Yen, J., Yoon, J., Walght, D., Wright, R., Walse, R., Walder, B., Walder, B., Waldrin, D., Waldren, A., Smith, H.O., Waistner, A., Weiss, R., Moden, H., Wolte, F., Waistner, A., Weiss, R., Smith, D., Von, L., Yoon, J., Yakub, S., Yen, J., Yoon, J., Yakub, S., Thao, S., Dunn, D., Von, Waistner, Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatocropic, and tissue sample. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying the progression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity, drug efficacy and drug metabolism. Note: The sequence data obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at

```
The present invention describes nucleic acid sequences (I) having a different degree of expression in hepatoblastoma from their expression in cormal liver tissue. ACCS1116 to ACCS1121 represents specifically claimed examples of (I). Also described: (I) nucleic acids stringently compared in the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of

Isolated polynucleotides, and encoded proteins, comprising secreted expressed sequence tags (SESTS), useful for treating various disorders such as autoimmune, infectious, and central nervous system disorders.

Claim 1; Page 549; 803pp; English.

AAA43426 to AAA45925 represent specifically claimed secreted expressed sequence tags (sESTS), isolated from human, mouse, chicken and rat tissue cources. The sBSTS can have a range of activities depending on the tissues they were isolated from. The activities include: chemotactic; hiromobylytic; antiinflammatory; cytostatic; antibacterial; antidiabetic; antibacterial; antidiabetic; antibacterial; antidiabetic; antibacterial; antidiabetic; antibacterial; cerebroprotective; anticonvulsant; and antidepressant. The sESTs can be cerebroprotective; anticonvulsant; and antidepressant. The sESTs can be identification and isolation of full-length on the sESTs are useful as probes for the identification and isolation of full-length on the sESTs can be identification and isolation of full-length on the sESTs can be considered by the sESTs. Proteins encoded by the sESTs are useful as says for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders (asthma), mysolador lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (castma), mysolado cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (chaemophila, thrombosis), inflammatory disorders (crohi, sumours, bacterial, fungal or viral infections, depression and disorders (haemophila, thrombosis), inflammatory disorders (crohi, sumours, bacterial, fungal or viral infections, depression and psoriasis, apa45926 to AAA45931 represent linker variants which are given in the exemplification of the present invention

New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA

Claim 1; SEQ ID NO 8242; 44pp; English

The invention relates to an isolated polynucleotide comprising any one of 18043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences

ö

```
are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensias, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CATGCTGAGAATCCTGACTGGTACTACACTGAGGACCAAGCTGATCCATGCCAGCCCAAC 298

                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (1) in a test sample or determining the expression profile of a gene group in the sample condition (as expression profile of a schaemia occlusive incompression profile of a is useful for examining the ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AR199202 to AB199912, encoding the protein sequences in ABS77020 to ABB57374) or by determining the protein sequences in ABS77020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression indicator when screening for ischaemic condition-improving drugs or indicator when screening for ischaemic condition related sequence. PCR primers for a mouse ischaemic domatic neglence, which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             253 AAGAAGCCAGAGTCTACACTCAAGTCACCAAGTTCCTGAATTGGATAAAGACCACCATG 312

Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for prodicting a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           384 CCAGAGICCTCCCTACTACTGCTGTGTAAACACCCTTACACAGGTCCCAGCTGCTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fit, wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                392
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            443

exon nucleic acid probes useful for analyzing
                                             The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the invention
                                                                                                                                                                                                                                                                          391 ccadadricereceraeracederidrereraabaacaeeerraeaeadareeeadeereere

                                                                                                                                                                                                                                                                                                    0
                                                                                                                                   The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention
                                                                                                                                                                                                                                                                                                                               383

liver, comprising one of 13100 defined mucleotide sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABS25011-ABS51005 represent human sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TCAGAAAGTGCAAAATACGTGCAAGGACAACCCATGTGGCCGGGGCCCAATGTCTCATTAC 383

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from the human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung, measuring gene expression in a sample derived from human lung, comprising (a) contacting the array, identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting a t least one exon from genomic sequences of the array; identifying exons in a least one exon from genomic sequences of the eukaryote; and (b) derecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung man, comprising (a) algorithmically predicting specific hybridisation of detectably labeled nucleic acids from eukaryote lung man, comprising (a) algorithmically defentioal to the probe for a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray, assigning exons to a single exon microarray having a probe with the exon, where a common pattern of the exons should be assigned to a single gene, a peptide comprising on microarray and for the exons in the subset for gene expression and year end for identifying exons in a gene, particularly using human conservable man and for the study of lung diseases such as astima, lung cancer, chronic obstructive pulmonary disease (CODB), intersettial lung derived minha and for the study of lung diseases such as astima, lung cancer, chronic obstructive pulmonary disease (CODB), intersettial lung disease (LID), familial idiopathic pulmonary fibrosis, pulmonary hardones such 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    324 TCAGAAAGTGCAAAATACGTGCAAGGACAACCCATGTGGCCGGGGCCAATGTCTCATTAC 383

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      recraedacidenanaraceracandaneaneecearereseeceseeceanererentare 392
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   391 CCAGAGTCCTCCCTACTACCGCTGTGTCTGTAAACACCCTTACACAGGTCCCAGCTGCTC 332
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           384 CCAGAGICCICCTACTACGGCTGTGTGTAAACACCCTTACACAGGTCCCAGGTGCTC

The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fit, wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                               Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 4; SEQ ID NO 19224; 639pp + Sequence Listing; English

/note="Vector: pSPORT1; Site 1: Not 1; Site 2: Sal I; Five | Incaries representing E10:5/12.5 pancreatic bud, E16.5 | Incaries representing E10:5/12.5 pancreatic bud, E16.5 pancreas, newborn pancreas, adult pancreas, and adult pancreas, and adult islets of Langerhans were seperately constructed using superScript Plasmid Library kit (Life Technologies). CDNA was made by oligo-dT priming and Size-selected by column fractionation. Libraries were amplified once on solid support and plasmid DNA from each library was prepared and mixed in equal amounts. The mixed library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806; 0.5 microgram single-stranded mixed library plasmid DNA was mixed with single-stranded mixed library plasmid mixed library inserts and hybridized to an Ecot of 6. Single-stranded (unhybridized) plasmids were isolated by hydroxyapatite chromatography and used to make this library."
